

Healthy Northeast Ohio is a neutral repository for population health data, tools, and resources for a 9-county region. The website is user-friendly and allows site users with varying levels of data skills to explore data and use it to drive action. Read more below on how the website can be used by grantees and grant making organizations to support the grant application and reporting processes.

## FOR GRANTEES

Grantees can use Healthy Northeast Ohio to help identify funding opportunities, support the grant writing process, and track and report progress to funders.

## FIND GRANT OPPORTUNITIES

### ✓ Search for grant opportunities from the federal government and large foundations

**Funding Opportunities Database:** Explore up-to-date funding opportunities

Home > Resource Library > Funding Opportunities

[Search the Resource Library](#)

### Funding Opportunities

Explore funding opportunities that can help you improve the health and well-being of your community. Funding opportunities are organized topically and include both government and foundation funding opportunities. Funding opportunities are added to the list on a regular basis and automatically removed when they expire. Click the links below to get started!

✓ **Find language to frame the issue and show the importance of it in your community**

Indicator Description & “Why is this important?” Text (Access on Indicator Detail Pages)

Home > Community Dashboard > Life Expectancy > County

## Life Expectancy

County: Ashtabula Measurement Period: 2018-2020 Filter: none (all Counties)

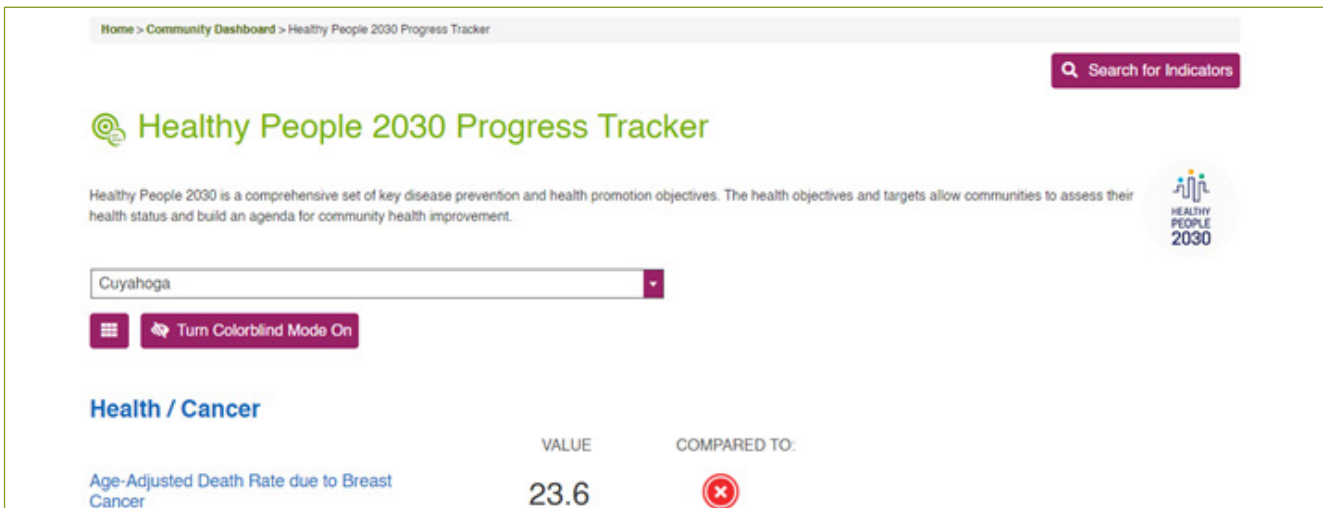

This indicator shows the life expectancy at birth in years. This represents the average number of years a person can expect to live.

**Why is this important?**

Life expectancy is a good measure of a population's longevity and general health. It is highly dependent on infant mortality rates and all-cause death rates. Although the overall U.S. average life expectancy at birth has been steadily increasing, there are great variations in life expectancy between racial and ethnic groups. In addition, great variations in life expectancy exist worldwide. These variations are mostly caused by differences in public health infrastructure, medical care, and diet.

✓ **Compare your community to targets, and other locations to identify areas for opportunity, set goals, and track improvements for reporting purposes**

### Health / Cancer

	VALUE	COMPARED TO:
Age-Adjusted Death Rate due to Breast Cancer	23.6	

Custom Dashboards: Create a dynamic custom dashboard to view comparisons for indicators of interest, that will automatically update as new data becomes available

## Health / Cancer

County: Geauga

	VALUE	COMPARED TO:
Adults with Cancer	8.9% (2019)	 OH Counties  U.S. Counties  US Value (7.1%)  Prior Value (8.6%)
Age-Adjusted Death Rate due to Breast Cancer	20.4 Deaths per 100,000 females (2015-2019)	 OH Counties  U.S. Counties  OH Value (21.6)  US Value (19.9)  Prior Value (19.6)  Trend  HP 2030 Target (15.3)

✓ **Identify where to focus your efforts**

**SocioNeeds Index® Suite:** Identify geographic areas within your community to focus on. Identify under-resourced areas at the county, zip code, and census tract levels

### 📍 SocioNeeds Index® Suite

The SocioNeeds Index Suite provides analytics around social determinants of health to advance equitable outcomes. Created by **Conduent Healthy Communities Institute**, each index summarizes multiple health and socioeconomic indicators into one validated composite score to help identify areas for action.

The SocioNeeds Index Suite can help:

- Justify and validate investments for prevention and early intervention
- Clearly communicate areas for shared action by healthcare, public health, social services, community organizations, business, and others
- Inform policies and interventions at the regional level

Click on each index below for an interactive map that visualizes each census tract, zip code, or county's index score within your service area from highest to lowest.

**Health Equity Index**  
(formerly SocioNeeds Index) A measure of social determinants

**Food Insecurity Index**  
A measure of food access

**Mental Health Index**  
A measure of social determinants

**Disparities Dashboard:** Identify disparities and see which sub-populations may be disproportionately impacted by the issue

### 📊 Disparities Dashboard

The Disparities Dashboard allows you to view all indicators that include breakout data by topics such as race/ethnicity, age and gender. The subgroup data charts are displayed below the overall indicator value. Breakout values that are significantly better or worse than the overall value will be highlighted in green or red.

Use the location drop down menu to select a location, and click on an indicator to see more details.

## FIND EVIDENCE-BASED STRATEGIES TO IMPLEMENT

✓ **Identify evidence-based interventions to implement to improve the health of your community, and explore what has been done nationally**

**Promising Practices Database:** Explore 2,000+ programs ranging from good ideas to evidence-based practices

Home > Promising Practices

## Promising Practices

The Promising Practices database informs professionals and community members about documented approaches to improving community health and quality of life. The ultimate goal is to support the systematic adoption, implementation, and evaluation of successful programs, practices, and policy changes. The database provides carefully reviewed, documented, and ranked practices that range from good ideas to evidence-based practices. [Learn more about the ranking methodology.](#)

Submit a Promising Practice

**A Matter of Balance**  
Filed under [Evidence-Based Practice](#) / [Health / Older Adults](#) / [Older Adults](#)

**GOAL:** The Matter of Balance/Volunteer Lay Leader (MOB/VLL) program is designed to reduce the fear of falling, stop the fear of falling cycle, and improve the activity levels among community-dwelling older adults. The goal of the program is to use volunteer lay leaders as facilitators, in order to make the program affordable to offer in the community setting.

**IMPACT:** When following up one year after the program, participants reported significant gains in fall management and there was a trend to increased exercise level as well. In addition, participants sustained a reduction in monthly falls.

**A Population Health Approach to Clinical Social Work with Complex Patients in Primary Care (Portland, Maine)**  
Filed under [Evidence-Based Practice](#) / [Health / Other Conditions](#)

**GOAL:** Patients with the highest medical and social vulnerability require a population-specific social work intervention in primary care to achieve positive medical outcomes and to decrease inefficient use of services, especially inpatient admissions and ED visits.

**IMPACT:** The study exhibits promise in decreasing inpatient visits and cost. The evidence also supports population-specific
